

Security and Profitability united by a common axle

Electronic Tire Calibrator
VIGIA NM 247 / NM 248

Exclusive models for trailers or semi-trailers.

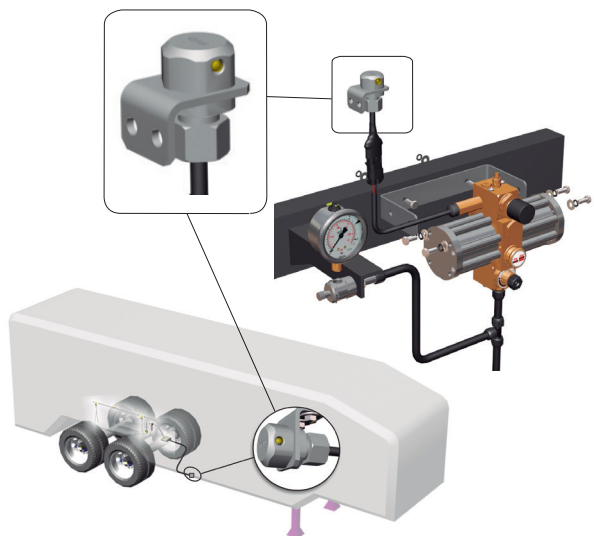

VIGIA NM 247

- Exclusive for semi-trailers.
- Internal system.
- Autonomous functioning with air pressure booster.

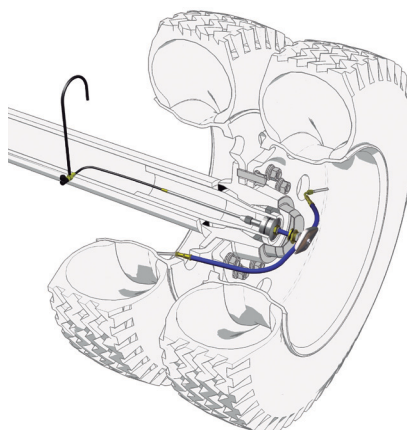

The VIGIA NM247 is an ideal revolutionary equipment to protect the tires from trailers and semi-trailers fully independently. No electricity needed to operate.

The equipment controls the pressure in tires and warns the driver through a LED indicator the severity of the defect. This equipment can provide itself with air from the deposit to operate its valves, and at the same time, it generates its own electrical current necessary for the functioning of the LED. We have developed the appropriate system for your vehicle with this technology. 100% control in tires, 100% safe. 100% autonomous.

VIGIA NM 248

Autonomous functioning. It is installed to the road tractor and no external installation is needed. 100% invulnerable.

Do not throw this brochure in the streets.

Internal system characteristics:

- Final solution to damages of external installations of air.
- The air goes to the tire through a special pipeline installed inside the axle.
